- SQL (MySQL, PostgreSQL, NoSQL)
- HTML5/CSS
- Git
- Express js,
- React-Redux, Redux-Toolkit

## Languages Known

- Marathi
- Hindi
- English

## CAREER OBJECTIVES

I have 3 years of experience in developing complex web applications using React JS. I have worked on various projects that involved building user interfaces, integrating apis, and developing responsive designs. My experience in implementing best practices in React JS development has resulted in delivering high-quality, scalable, and maintainable code. I have worked as a hardware engineer for 10 years, but I am not finding the challenges in the field so I decided to switch the job. I started from the education and learn the software development and still I am learning the new things in my daily routine.

## WORK EXPERIENCE

### REDBYTES SOFTWARE'S PVT. LTD

*React JS Developer*

📅 March 2022 – May 2023 📍 Aurangabad, Maharashtra, India

- Developing back-end website applications
- Designing and developing APIs.
- Participating in continuing education and training to remain current on best practices, learn new programming languages, and better assist other team members.
- Developing ideas for new programs, products, or features by monitoring industry developments and trends.

### TECHINVENTO IT SERVICES PVT. LTD

*Full Stack Developer*

📅 August 2021 - March 2022 📍 Aurangabad, Maharashtra, India

- Work with development teams and product managers to ideate software solutions
- Build the front-end of applications through appealing visual design
- Develop and manage well-functioning databases and applications

## ALPHA DEVELOPER TEAM

*Full stack developer*

📅 May 2020 - Aug 2021 📍 Aurangabad, Maharashtra, India

- Developing Apis with node JS and integrate those apis with React Frontend Application.

## PROJECTS

### KAHUNA

*Front End Developer (React JS)*

- It's a social media platform for online bidding of celebrities. I am working with team I am working as Full stack developer.
- This app is developed using **React JS** at frontend and for backend we used **nodejs** and saving data we used the **Mongo Db**.

## **DOCTS PRO**

### ***Full Stack Developer (Svelte AND Node JS)***

- ◆ It's a Web Platform for all persons who need information about medical facilities Available in the city. In this app User will able to know the information about available Pharmacies, Doctor's, Fitness Centers, Laboratories, Hospitals. By sign in user is able to book appointment with the doctor and hospitals. Also, Service provider like doctor, pharmacists and others may able to register their services on this platform.
- ◆ The front End is developed using **svelte** and backend is developed using **node js** and for saving data we used **MongoDb**.

## **TRAVFERR**

### ***Front End Developer (React JS)***

- ◆ In this project there were two modules' Travelers, Guide. It is a platform for the traveler to search for the guide. Ad he is able to chat guide for location where is visiting.
- ◆ For front-end I used React and for backend we used node for chat.
- ◆ Created social media login for the application, if user dont wants to register on the application

## **ABAY LOGISTICS (Transporter App)**

### ***Front End Developer (React JS)***

- ◆ In this project there were three modules Shipper, Transporter and Admin. Shipper is going to add the load, and admin will approve and assign the transporter and transporter will then assign the vehicles to that load.
- ◆ We have used React fr front-End and python on back end. I implemented over 200 apis in react
- ◆ This application is used for managing loads for shipper. Shippers can request different vehicles and different materials loads to be picked/dropped on different locations.

## **WORKR (Job portal)**

### ***Front End Developer (React JS)***

- ◆ In this project there were three modules customer, company and individual driver. It contains features such as live tracking, google map integration and many more. The basic functionality is customer can send a load and company can assign driver to the load and load will be delivered in this process the load will be tracked completely by customer, driver as well as company
- ◆ Developing frontend in react js, Firebase, Social media login

## GLIMMER

### *Front end developer (React JS)*

- ◆ Chat Application Developed in React JS, Where user is able chat, call , video chat with desktop sharing
- ◆ We have used React JS for frontend and node JS for apis
- ◆ We have used JITSI for video and audio chat and desktop sharing
- ◆ We have used postGre SQL for Storing the data

## VEHICLE TRACKING

### *Front end developer (React JS)*

- ◆ Its platform for Track the vehicles on the map
- ◆ user is able to add type of the service like traking the vehicle if it is overspeed or not , it is parked or not, it is running

I have shown all traking information on Leaflet map and google map

## BOP

### *Front end developer (Angular 8)*

- ◆ its a online Platform for property agent and a banker, Where property owner is able apply for the loan on the half of a customer who wants to buy the property in united states. With respect of the application banker is able approve or reject the application. All the process is online. And both the parties have to pay the subscription amount for this. Frontend In angular,

## WIFI ATTENDANCE

### *Front End Developer (React JS)*

- ◆ It is an employee management system.
- ◆ Where employee have punch in and punchout.
- ◆ Also the project management is there manager will able to assign the projects.

Emplyee have to fill the timesheet and manager will have to applove that

Also, there is a facility to chat with the other employees, able chat in groups and able share the desktop.
